

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	14 September 2026
Team ID/SID	[SWUID2026136950]
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

FUNCTIONAL REQUIREMENTS

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Network Request Submission	Submit request via Service Catalog
FR-1		Fill form with Request Type, Device, Access Level, Justification
FR-1		Attach supporting documents
FR-1		Receive request number after submission
FR-2	Dynamic Form Behavior	Show Device and Port fields when Request Type is Firewall
FR-2		Show Access Level field when Request Type is Access
FR-2		Hide irrelevant fields based on request type
FR-2		Enforce mandatory fields dynamically
FR-3	Approval Workflow	Route request to Network Approvers group
FR-3		Send approval email with direct link
FR-3		Allow approver to approve or reject with comments
FR-3		Wait for approval before creating fulfillment task
FR-4	Task Automation	Auto-create Catalog Task after approval
FR-4		Auto-assign task to Network Team

FR-4		Link task to Requested Item as parent
FR-4		Set task state to Open by default
FR-5	Fulfillment Tracking	Allow Network Engineer to add work notes
FR-5		Allow Network Engineer to mark task as Closed Complete
FR-5		Track task state changes (Open, Work in Progress, Closed Complete)
FR-5		Display task history in activity stream
FR-6	Auto-Closure	Auto-close Requested Item when task is closed
FR-6		Update Requested Item state to Closed Complete
FR-6		Update Approval status to Approved
FR-7	Email Notifications	Send submission confirmation to requester
FR-7		Send approval request to approver
FR-7		Send approved/rejected email to requester
FR-7		Send completion email to requester
FR-8	Access Control	Create roles: requester, approver, engineer
FR-8		Create groups: Network Requesters, Network Approvers, Network Team
FR-8		Enforce ACLs for read, create, and write operations
FR-8		Restrict record access based on role
FR-9	Reporting and Visibility	Generate report for request volume by state
FR-9		Generate report for task performance by team
FR-9		Provide dashboard with key metrics
FR-9		Track SLA compliance for approvals
FR-10	Audit Trail	Log all approval actions with timestamp
FR-10		Log all task state changes
FR-10		Maintain full history for audit purposes

NON-FUNCTIONAL REQUIREMENTS

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Service Portal interface must be simple and intuitive. Requesters should be able to submit a request in under 2 minutes without training. Dynamic UI Policies should show only relevant fields to reduce confusion.
NFR-2	Security	Role-based access control (RBAC) must be enforced. ACLs must restrict record access to authorized users only. All approval actions must be logged for audit. Sensitive data must be protected.
NFR-3	Reliability	The system must handle request submissions without failure. Flow Designer must reliably create tasks and send notifications. Auto-closure must work even if the approver or engineer is unavailable.
NFR-4	Performance	The catalog item form must load within 2 seconds. Approval emails must be sent within 30 seconds of submission. Task creation must complete within 1 minute of approval. Reports must load within 5 seconds.
NFR-5	Availability	The system must be available 24x7. Service Portal must be accessible from any browser and device. Email notifications must be delivered reliably. Downtime must not affect existing requests.
NFR-6	Scalability	The system must support at least 100 requests per day. The custom table must handle thousands of records without performance issues. The flow must handle concurrent requests without conflict. Reports must scale as data grows.
