

Appendix

Team ID	SWUID2026136950
Project Name	Automated Network Request Management in ServiceNow

Source Code

This project is built on ServiceNow using native platform features. The main source code components include:

1. **Business Rules (JavaScript)**
 - Set Default State and Requested For
 - Auto Assign Network Task
2. **Client Scripts**
 - UI Policy script for mandatory field hiding
 - Cancel Request UI Action script
3. **Flow Designer**
 - Network Request Automation Flow (Global) — 7 actions
4. **UI Policies**
 - Show Firewall Fields on Request Type Firewall
 - Show Access Level on Request Type Access
 - Show Device and Port for Configuration
5. **Notifications (8)**
 - Network Request Submitted
 - Network Request Submitted - Approval Required
 - Network Request Approved or Rejected
 - Network Request Completed
 - SLA Breach Notification
 - Approval Reminder - 1 Hour
 - Approval Escalation Alert
 - Network Request Feedback Request
6. **SLA Definition**
 - Network Request Approval SLA (4 Hours)
7. **Reports (3)**
 - Network Request Volume by State
 - Network Task Performance
 - Network Request SLA Compliance
8. **Dashboard**
 - Network Request Management Dashboard

Business Rule Scripts:

```
// Business Rule: Set Default State and Requested For
(function executeRule(current, previous) {
    if (!current.u_state) {
        current.u_state = 'new';
    }
    if (!current.u_requested_for) {
        current.u_requested_for = gs.getUserID();
    }
})(current, previous);
```

```
// Business Rule: Auto Assign Network Task
(function executeRule(current, previous) {
    if (!current.assignment_group) {
        var gr = new GlideRecord('sys_user_group');
        gr.get('name', 'Network Team');
        if (gr.isValidRecord()) {
            current.assignment_group = gr.sys_id;
        }
    }
    if (!current.state) {
        current.state = 1; // Open
    }
})(current, previous);
```

Dataset Link

This project does not use an external dataset. All data is generated within the ServiceNow instance during testing, including:

1. Custom Table Records — NET0001001 to NET0001008
2. Requested Items — RITM0010001 to RITM0010026
3. Catalog Tasks — SCTASK0010001 to SCTASK0010026
4. Approvals — sysapproval_approver records
5. CMDB Devices — cisco-switch-01, cisco-router-01, firewall-01
6. Users — network.requester, network.approver, network.engineer
7. Groups — Network Requesters, Network Approvers Global, Network Team, Network Escalation Managers

All records are created through the Service Catalog submission process and the Flow Designer workflow.
